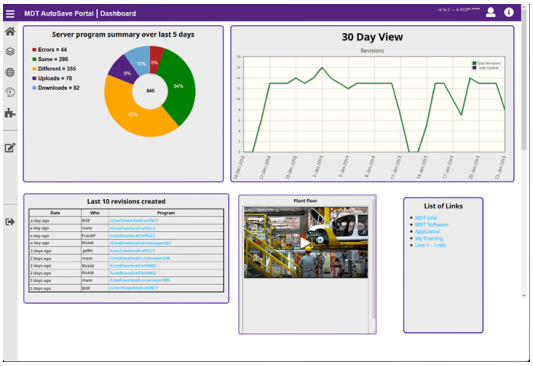
MDT AutoSave Version 7.00

New Features and Benefits of MDT AutoSave v7.00 include:

The AutoSave Portal

The AutoSave Portal is a decision support dashboard that enables users to view all AutoSave activity in the plant including program activity, success or failure of device program compare results, program comparison details, and much more. This vital plant information is accessed from a single web interface that can run on workstations, laptops and mobile devices.



With the Portal, you can now access the following through the easily navigated, secure, user-friendly interface:

- Live monitoring of revision activity, command groups, agents, critical program data (version, processor type, last time changed, last time verified and more.)
- Critically important data when assessing cybersecurity risks (firmware version, processor type and more.)
- Integration of reporting and data management
- Customizable dashboard
- Reporting data on demand

New Command Group Editor

This new app manages AutoSave Command Groups. The groups can be scheduled to run or can be run on demand. Users can:

- Start (on demand) or stop a command group
- View the last time the command group was run. If it is currently active, a report summarizing status is available
- Control which programs in a group should allow AutoUpdate
- Control (override defaults) how much time should be allocated to specific tasks within the command group

Expanded Language Capabilities

Support for German, French, Spanish and a framework for other languages is included. See the v.700 Release Notes for more information about language support.

Secure Webserver Access (https)

This feature provides improved webserver and storage access.
