

ERP and MES:

A Match Made in Heaven

Complete end-to-end visibility across shop floors

Real-time feedback for rapid, informed decisions

An integrated approach to ERP and MES

What does a Manufacturing Execution System (MES) Bring to the Table?

A programmatic approach to multi-site operations transformation

AVEVA's model-driven MES approach combines the benefits of a manufacturing execution system with digital workflow management technology to bring people and processes together. The results - increased operational efficiency and intelligence.

Benefit from a new level of reusability and sustainability, a key enabler for sharing best practices and standardisation of processes, KPIs and reporting across lines, plants and multi-site enterprises.

Digitalise

Capture manufacturing processes and collaborations and digitalise them using low code technology to transform how work is done in the plant.

Standardise

Manage best practices, KPIs, product specifications and compliance and safety data between sites.

Improve

Continuous improvement of processes based on rich data collection with governed change management.

Digital operations management benefits:

Users of AVEVA's Manufacturing Execution System are seeing vast increases in efficiency, quality and productivity.

“

“The technology we have deployed has future-proofed our operations. Adding or altering a production line is no longer a time-consuming task and the software and hardware agnostic capabilities of AVEVA mean bringing in new OEMs is simpler than ever.”

Julian Bolton
IT Director
Princes Group
